How do I auto draw the crash location?

Eric Newman - 2026-03-11 - eCrash

AutoScene Draw provides the option to automate the drawing of a location. In order to use the feature, the location must already be populated, via Mapclick, in the crash report.

Please follow these instructions to automatically draw the crash location.

1. Click Diagram section.

2. Click "Add".

> The AutoScene Draw diagramming software opens in a new window.

3. Select the "Auto Draw Now!" *button*. It is the top option in the upper-right of the viewable map,

4. Verify the location presented.

5. Click "Auto Draw".

> AutoScene Draw completes the diagram of the location in the viewable map.

6. Modify the diagram as appropriate.

7. Close the window and select "Save".

Note on the diagram.

> The satellite imagery is automatically removed when saved. Inclusion of the satellite imagery is not an option.
